

In this release, we introduce OGT's newest product, ProBot™. This new application is a unit monitoring and advice tool designed for use with operating process facilities and is provided as an Add-In to Microsoft Excel®. ProBot™ facilitates and simplifies the gathering and marshalling of operating data between an existing data historian or DCS and the ProTreat®/SulphurPro® simulator, performs engineering calculations and automated analysis of field and lab data, and provides expert-derived feedback on operations based on that data. Licensees of ProBot™ will also be provided with a fixed number of consulting hours to customize the product to their facility. For additional information, contact an OGT Applications Engineer at info@ogtrt.com or call +1 512 312 9424.
